

Discharge report

FETOREX Sachets to mask the smell of plants

What is its purpose?

FETOREX is a composition of natural fragrances and minerals, encapsulated in biodegradable sachets. It is non-toxic and safe for animals. FETOREX acts solely on the sense of smell, masking the odour emitted by plants and thus protecting cultivated areas from foraging wild boars.

What advantages does it offer?

- Natural product, fully biodegradable.
- Easy to apply, ready to use.
- The user has no direct contact with the plant odour masking substance.
- Effective in action and efficient in application.
- Contains minerals to improve soil structure.

How to use FETOREX?

The sachets should be scattered every 4 metres or so directly onto the soil, around the crop at risk. With 100 sachets, up to 1 hectare of crop can be protected. If threatened from one side, deploy the sachets in two independent lines 2 metres apart. The sachets should not be torn or cut. The plant odour masking substance is released spontaneously when exposed to moisture. Do not use the sachets in the rain.

How long does the product work?

Up to 5 weeks under normal weather conditions. Spread additional sachets if a reduction in efficacy is observed.

How to store the product?

Store the sachets in the original sealed packaging in a dry, cool and well-ventilated place, away from foodstuffs and animal feeding stuff. Protect from moisture and sunlight.

What precautions to take?

Keep out of the reach of children. Avoid ingestion, inhalation, skin, and eye contact. In case of skin contact, wash with plenty of soap and water. If the sachet is torn, dilute the contents with water and spread over the area to be protected.

Expiry date: 6 months from date of manufacture.

Contents: Pack contains 50 sachets with a net weight of 10 g.
